SANDPAPER

Sandpaper is available in various grits, which are identified by specific numbers. The higher the number; the finer the grit, and in turn – the smoother the finish. For rough sanding such as finish removal or wood shaping, 60 & 80 grit paper is best. For medium sanding such as rough wood or light finish removal, 100 & 120 grit papers are recommended. Anything above 150 is ideal for fine finish or smooth sanding. You should select the specific paper for your specific sander and application.
